

OpenStreetMap

The Free Wiki World Map

What is OpenStreetMap

- OpenStreetMap (OSM) is a free world map based on the 'Wiki'-principle
 - *Technically, it's a spatial database and not a map*
- Based on the work of >1.5 M hobbyist cartographers "*Mappers*"

What is OpenStreetMap

- OpenStreetMap (OSM) is a free world map based on the 'Wiki'-principle
 - *Technically, it's a spatial database and not a map*
- Based on the work of >1.5 M hobbyist cartographers "*Mappers*"
- Licence: Open Database Licence: Think of CC-BY-SA for Data.

Why OpenStreetMap

Reasons for creating an Open Streetmap:

- There were no free geodata
- Usage of existing maps is expensive
- Accuracy of existing maps, errors?
- Creating your own styled map

What do we need?

A worldwide standardised system, benefits:

- One schema (taxonomy), one API
- Only one account, wherever in the world
- We need to work in parallel
- Centralised DB: if one project is abandoned, the data is preserved

Benefits of OpenStreetMap

- OSM is independent, run by the OSM Foundation
- Data is free - if the foundation collapses, everyone can restart the project
- Proven infrastructure of 100% Free Software
- Backed by an active scientific community
- Dynamic ecosystem of applications and supporters
- Large community, error correction through "wisdom of the crowd"
- A lot of data is already there - mostly additions needed

Help

- First place should be the wiki:<http://wiki.openstreetmap.org>
- For questions: \Rightarrow mailing lists!
- If it exists in your town: the local user group meeting! see openstreetmap.de.
